CONTENTS

INTRODUCTION	vi
CHAPTER 1: AN OVERVIEW OF <i>FIRST STEPS IN MATHEMATICS</i>	1
Beliefs about Teaching and Learning	2
Learning Mathematics: Implications for the Classroom	4
Understanding the Elements of <i>First Steps in Mathematics</i>	8
How to Read the Diagnostic Maps	12
Planning with <i>First Steps in Mathematics</i>	15
CHAPTER 2: UNDERSTAND PROBABILITY	21
Understand Probability: Key Understandings Overview	22
Key Understanding 1: Some things we are sure will or will not happen and other things we are unsure about.	24
Sample Learning Activities	26
Key Understanding 2: There are special words and phrases we use to describe how likely we think things are to happen.	32
Sample Learning Activities	34
Case Study 1	40
Key Understanding 3: We can compare and order things by whether they are more or less likely to happen.	42
Sample Learning Activities	44
Case Study 2	52
Case Study 3	54
Key Understanding 4: We say things have an equal chance of happening when we think they will happen equally often in the long run.	56
Sample Learning Activities	58
Key Understanding 5: We can use numbers to describe how likely something is to happen.	64
Sample Learning Activities	66

Key Understanding 6: Sometimes we list and compare all the possible things that could happen to predict how likely something is to happen.	72
Sample Learning Activities	74
Key Understanding 7: Sometimes we use data about how often an event has happened to predict how likely it is to happen in the future.	80
Sample Learning Activities	82
Case Study 4	90

CHAPTER 3: COLLECT AND PROCESS DATA (PART A)

Collect and Organize Data **93**

Collect and Process Data (Part A): Key Understandings Overview **94**

Key Understanding 1: We can answer some questions (and test some predictions) by using data.	96
Sample Learning Activities	98
Case Study 1	104
Key Understanding 2: We can produce data by counting or measuring things, asking groups of people, watching what happens, or reworking existing data.	106
Sample Learning Activities	108
Key Understanding 3: Organizing data in different ways may tell us different things.	114
Sample Learning Activities	116
Case Study 2	124
Case Study 3	126
Key Understanding 4: We should make our data as accurate and consistent as possible.	130
Sample Learning Activities	132
Case Study 4	138
Key Understanding 5: Sometimes we collect data from a subset of a group to find out things about the whole group. There are benefits and risks in this.	142
Sample Learning Activities	144

CHAPTER 4: COLLECT AND PROCESS DATA (PART B)

Summarize and Represent Data **149**

Background Notes: Types of data displays **150**

Collect and Process Data (Part B): Key Understandings Overview **154**

Key Understanding 1: We can display data visually; some graphs and plots show how many or how much is in each category or group.	156
Sample Learning Activities	158
Case Study 1	171

Key Understanding 2: We can display data visually; some graphs and plots show how one quantity varies over time.	174
Sample Learning Activities	176
Key Understanding 3: We can display data visually; some graphs and plots show how two quantities are related.	182
Sample Learning Activities	184
Key Understanding 4: We use tables and diagrams to organize and summarize data in a systematic way.	190
Sample Learning Activities	192
Key Understanding 5: How we display our data depends on the kind of data we have and our purpose.	198
Sample Learning Activities	200
Case Study 2	207
Key Understanding 6: We can use words and numbers to summarize features of a set of data.	210
Sample Learning Activities	212
Case Study 3	220

CHAPTER 5: INTERPRET DATA **223**

Interpret Data: Key Understandings Overview **224**

Key Understanding 1: Graphs, tables, and diagrams display data about the real world, although they are not pictures of the real world. We need to learn how to read them.	226
Sample Learning Activities	228
Case Study 1	237
Key Understanding 2: When we analyze and interpret data, we are deciding what it says and what it means. There is a difference between the data itself and what we think it means.	240
Sample Learning Activities	242
Case Study 2	249
Key Understanding 3: We need to evaluate the data we are using in order to be confident about the conclusions we have drawn.	252
Sample Learning Activities	254

APPENDIXES **261**

Planning Master	262
Tracking Master	263
Diagnostic Map Masters	264
