CONTENTS

INTRODUCTION	vi
CHAPTER 1: AN OVERVIEW OF <i>FIRST STEPS IN MATHEMATICS</i>	1
Beliefs about Teaching and Learning	2
Learning Mathematics: Implications for the Classroom	4
Understanding the Elements of First Steps in Mathematics	8
How to Read the Diagnostic Map	12
Planning with First Steps in Mathematics	15
CHAPTER 2: UNDERSTAND UNITS	21
Understand Units: Key Understanding Overview	22
Key Understanding 1: We can compare objects or events by how much of a particular attribute each has. Different attributes may result in different orders.	24
Sample Learning Activities	26
Key Understanding 2: There are special words and phrases that help us to describe and compare quantity.	32
Sample Learning Activities	34
Key Understanding 3: To measure something means to say how much of a particular attribute it has. We measure by choosing a unit and working out how many of the unit it takes to match the object or event.	40
Sample Learning Activities	44
Case Study 1	48
Case Study 2	51
Key Understanding 4: The instrument we choose to represent our unit should relate well to the attribute to be measured and be easy to repeat to match the object or event to be measured.	54
Sample Learning Activities	56
Key Understanding 5: Measurements of continuous quantities are always approximate. Measurements can be made more accurate by choosing smaller units, subdividing units, and using other strategies.	62
Sample Learning Activities	64

Key Understanding 6: Our choice of attribute and unit depends on what we are trying to measure and why.	70
Sample Learning Activities	72
Case Study 3	79
Key Understanding 7: Standard units help us to interpret, communicate, and calculate measurements.	82
Sample Learning Activities	84
Key Understanding 8: The relationships between standard units in the metric system help us to judge size, move between units, and do computations.	90
Sample Learning Activities	92
Case Study 4	100

CHAPTER 3: DIRECT MEASURE **103**

Background Notes: Measuring Area and Volume **104**

Direct Measure: Key Understandings Overview **110**

Key Understanding 1: We can directly compare objects or events to say which has more length, mass, capacity, area, volume, angle, or time.	112
Sample Learning Activities	114
Case Study 1	122
Key Understanding 2: We can indirectly compare two objects by using other objects as go-betweens or by altering the objects in some way that does not affect the quantity.	126
Sample Learning Activities	128
Key Understanding 3: To measure consistently we need to use our instrument in a way that ensures a good match of the unit with the object to be measured.	134
Sample Learning Activities	136
Key Understanding 4: Calibrated scales can be used as a substitute for repeating units when measuring length, capacity, mass, angle, and time.	142
Sample Learning Activities	152
Case Study 2	
Key Understanding 5: Units are quantities and so we can use different representations of the same unit so long as we do not change the quantity.	156
Sample Learning Activities	158
Case Study 3	165
Key Understanding 6: We can judge and measure time using both natural cyclical changes and special techniques and tools which people have developed.	168
Sample Learning Activities	170

APPENDIX	179
Line Masters	180
Planning Master	185
Diagnostic Map Masters	186
